DPI Calculator
Calculator: dpi-calculator | Engine version: 1
Raw engine values: full numeric precision; no display rounding or sampled rows.
Units appear only where supplied by the calculation or bound display metadata.
Embedded Unicode glyphs are readable.
Unsupported characters and controls use explicit Unicode escapes.
Tagged PDF; PDF/UA conformance: UNVERIFIED.
Text follows document order; charts include complete numeric text alternatives.

INPUTS
Pixels
input["pixels"] = 3000
Length (in) [in]
input["lengthInches"] = 10

RESULTS
Linear density [DPI]
output["value"] = 300
output["steps"][0] = "DPI = 300"

METHODOLOGY
Deterministic calculation using the reviewed Technology & Computing engine.\u000aTechnical calculation revision: technology.dpi@1\u000a\u000aLinear pixel/dot density from a supplied pixel count and physical length.\u000aDPI = pixels ÷ length inches

DECLARED FORMULAS
dpi-calculator: DPI = pixels ÷ length inches
Linear pixel/dot density from a supplied pixel count and physical length.

SOURCES
NIST — Nominal Resolution
https://www.nist.gov/glossary-term/28116
NIST defines nominal image resolution as the number of pixels per unit distance (for example ppi or ppmm). The CalcuMint DPI calculator reports the supplied linear pixel-count-per-inch ratio and does not treat printer dots and display pixels as interchangeable concepts.
