Cloud Data Transfer Cost Calculator
Calculator: cloud-data-transfer-cost-calculator | Engine version: 1
Raw engine values: full numeric precision; no display rounding or sampled rows.
Units appear only where supplied by the calculation or bound display metadata.
Embedded Unicode glyphs are readable.
Unsupported characters and controls use explicit Unicode escapes.
Tagged PDF; PDF/UA conformance: UNVERIFIED.
Text follows document order; charts include complete numeric text alternatives.

INPUTS
Transfer (GB) [GB]
input["transferGb"] = 500
Price per GB
input["pricePerGb"] = 0.09

RESULTS
Transfer cost [currency units]
output["value"] = 45
output["steps"][0] = "Cloud Data Transfer Cost = 45"

METHODOLOGY
Deterministic calculation using the reviewed Technology & Computing engine.\u000aTechnical calculation revision: technology.cloud-data-transfer-cost@1\u000a\u000aProvider-neutral transfer estimate using a user-supplied price; tiers and free allowances are not modeled.\u000aTransfer cost = transfer GB × price per GB

DECLARED FORMULAS
cloud-data-transfer-cost-calculator: Transfer cost = transfer GB × price per GB
Provider-neutral transfer estimate using a user-supplied price; tiers and free allowances are not modeled.

SOURCES
NIST SP 1181 — Unit Pricing Guide
https://www.nist.gov/publications/nist-sp-1181-unit-pricing-guide-best-practice-approach-unit-pricing-2025-ed
NIST documents unit pricing as expressing price relative to a unit quantity. These provider-neutral estimators multiply a user-supplied quantity by a user-supplied unit price; provider tiers and allowances remain outside the calculation.
