Base64 Size Calculator
Calculator: base64-size-calculator | Engine version: 1
Raw engine values: full numeric precision; no display rounding or sampled rows.
Units appear only where supplied by the calculation or bound display metadata.
Embedded Unicode glyphs are readable.
Unsupported characters and controls use explicit Unicode escapes.
Tagged PDF; PDF/UA conformance: UNVERIFIED.
Text follows document order; charts include complete numeric text alternatives.

INPUTS
Input bytes
input["inputBytes"] = 1000

RESULTS
Base64 encoded size [bytes]
output["value"] = 1336
output["steps"][0] = "Base64 Size = 1336"

METHODOLOGY
Deterministic calculation using the reviewed Technology & Computing engine.\u000aTechnical calculation revision: technology.base64-size@1\u000a\u000aBase64 encoded payload length without line wrapping or data-URL/MIME headers.\u000aEncoded bytes = 4 × ceil(input bytes ÷ 3)

DECLARED FORMULAS
base64-size-calculator: Encoded bytes = 4 × ceil(input bytes ÷ 3)
Base64 encoded payload length without line wrapping or data-URL/MIME headers.

SOURCES
RFC 4648 — Base-N Encodings
https://www.rfc-editor.org/rfc/rfc4648
Base64 represents 24 input bits (three octets) as four encoded characters, with padding for incomplete final groups.
